

TREATMENT-AS-A-SERVICE

Data-driven water treatment

Manage dosing, capture chemical consumption, and pinpoint issues before they become problems.

ONE WATER TREATMENT STACK TO:

Optimize chemical dosing

Keep tabs on total chemical consumption

Stop overdosing costs

Unlock cross-chemical insights

Improve critical KPIs

CarboNet ●●

The problem: Permian operators are in a catch-22 with produced water treatment:

↳ They have to constantly babysit make-down and dosing to avoid bad flocs gumming up the system and shutting down operations, but...

↳ Their operations are spread across dozens of sites, making it costly to crew and manage every site, every day.

The result? The chemistry goes sideways and they absorb constant hits to the P&L—losses that could be avoided if they were able to track and manage treatment remotely.

CarboNet's SpecialOps was designed to solve this puzzle, offering operators the chemistry, pumps, sensors, and data to understand their sites and ensure operations runs smoothly and profitably.

SpecialOps offers integrated chemistry, automated dosing, and data feedback to help operators run lean and stay profitable.

CarboNet made its name in the Permian with SimpleFloc—a no make-down flocculant that dramatically reduces CAPEX, OPEX, and emissions.

SpecialOps expands that impact with remote sensing and predictive monitoring, helping:

Boost efficiency: Optimize chemicals using real-time data to avoid under or over-dosing, gummed up tooling and shut-downs, and permit breaches.

Improve planning: Use data from across your sites to create benchmarks and measurable KPIs that improve your planning, budgets, and performance.

Cut costs: Use data to pinpoint wasted materials and underperforming equipment. Use remote sensors to manage more sites with less crew.

SpecialOps INCLUDES

Chemistry & treatment services

- Flocculants: SimpleFloc
- Coagulants: PAC, ACH
- Rigup/Rigdown of flocculant
- Water testing and site dosing
- Chemical application advisory service
- Winterization

Automation support

- Pump programming (SCADA)
- Connection of proportional controls
- Site-wide, cross-chemical support

“I sleep at night knowing my guys aren’t running around managing peroxide, mixing poly, adding coag... and constantly adjusting dosing. CarboNet makes things a LOT easier.”

Midstream Operator

Permian Basin

CarboNet: As freshwater becomes increasingly scarce and regulated, companies from energy and mining to food and beauty turn to CarboNet to reduce, recycle, and renew the water they need to compete.
