

Sustainability Intelligence For Finance

AI-powered, expert-validated.

Introducing Manifest Climate

- 01 The Market Reality
- 02 Meet Manifest Climate
- 03 Real-world Impact
- 04 Use Case Demos
- 05 Next Steps

Sustainability data is stuck in a **one-size-fits-all** world where **quality & relevance** is an afterthought

Vast, rigid datasets that lack flexibility don't suit datapoint needs & proprietary frameworks

Quality verification and **manual processes** with fragmented, incomparable data wastes critical time

Gaps in coverage for private disclosures & inability to assess internal documents

Black-box ESG ratings that lack transparency and auditability.

Current approaches lack flexibility & defensibility

Generic AI Agents
& In-house Tooling

Bring speed and AI automation to ESG analysis, but performance around accuracy lacks rigor of expert validation.

Traditional Data Providers

Inflexible, pre-defined datasets. Fragmented data with burden for quality verification placed on users.

Manual Processing

Manual research and analysis is time-consuming, inconsistent, difficult to scale and eats into time for strategic work.

MANIFEST FOR INVESTORS & STEWARDSHIP

Mounting pressure for financial institutions to accurately manage risk, optimize portfolios, and do so at scale, increasingly depends on **high-quality sustainability data and insights.**

Risks faced by sustainable investing & stewardship teams incur mounting costs

Inaccurate or outdated data weakens investment decisions

Undermines the application of proprietary investment frameworks, leading to poor investment decisions, ineffective risk mitigation, and missed return opportunities tied to ESG performance.

Data gaps in material sustainability data limits evaluation capabilities

Limits the ability to evaluate portfolio companies against internal benchmarks, resulting in weaker engagement, misaligned voting strategies, and failure to meet portfolio- and corporate-level sustainability objectives.

Manual data verification and analysis cannot scale

Drain resources and prevent scalability, limiting institutional capacity to cover broad portfolios or respond quickly to emerging sustainability risks and opportunities.

Manifest is trusted by leading sustainable investing and stewardship teams to **drive outcomes and create value**

Make fast, better-informed investment decisions

Improve investment performance and risk mitigation by applying internal sustainability frameworks to high-quality, timely, and comprehensive data across the entire portfolio.

Scale active portfolio engagement

Scale stewardship activities, including engagement and proxy voting, with confidence in the consistency and traceability of sustainability insights.

Better defend your sustainability credentials

Mitigate the risk of stakeholder scrutiny and credibility when communicating ESG progress. With reliable, auditable sustainability intelligence, you can report progress accurately and respond to investor questions with confidence.

BEST OF AI MEETS HUMAN EXPERTISE

Manifest Climate harnesses AI to transform fragmented, unstructured documents, to custom sustainability data and clear insights—instantly accessible for the way you work.

BEST OF AI MEETS HUMAN EXPERTISE

- 1 Expert-validated AI platform** delivering audit-grade intelligence across advisory workflows
- 2 Grounded in global frameworks** to assess against 1500+ datapoints across governance, ESG metrics & targets, physical risk and other critical topics
- 3 Custom analysis** and configurable datasets to generate decision-useful insights your competitors can't replicate
- 4 Replicates your analytical approach** ensuring seamless integration into decision-making workflows.
- 5 Trusted by world-leading companies**, including Meta, Deloitte, Capital One, and PwC, to name a few.

Reliable, comparable sustainability intelligence that better informs mission-critical decisions across four key areas

Performance Analysis

Assess disclosures against custom frameworks or standards and compare performance across entities.

Topic Analysis

-  Governance
350 requirements
-  Emissions Targets
150 requirements
-  Transition Plans
400 datapoints

Analyze how key sustainability topics are addressed within a company and across sectors, geographies, and peer groups.

Compliance Analysis

-  CSRD
1,100 requirements
-  IFRS S1/S2
400 requirements
-  TCFD
350 requirements

Assess disclosures alignment against mandatory and voluntary sustainability reporting standards.

Custom Analysis

Define and extract proprietary datapoints aligned to your investment methodologies, across public and private entities.

Outperforming in **accuracy, relevancy & accessibility**

Manifest combines advanced AI architecture with deep domain-expertise

Manifest Climate's AI + methodology advantage

Using generic tools or manual processes leaves you with inconsistent, less accurate sustainability data and assessment reasoning that's hard to trust and scale. Our purpose-built AI is designed specifically for sustainability analysis—continuously refined to capture the nuance, context, and complexity needed to deliver reliable, decision-grade insights.

- Adding Manifest Climate's Methodology increases accuracy by **12%**
 - Adding Manifest Climate's AI increases accuracy another **4.2%**
 - Overall solution **surpasses human accuracy** with added consistency
- *Base AI includes:**
- PDFs uploaded to the OpenAI API, processed, and added to [vector_stores](#).
 - Basic RAG solution.
 - Using structured outputs and the [o3-mini model](#) (better reasoning model than GPT-4o).

Driving Scale & Impact with Data: OMERS' ESG Breakthrough with Manifest Climate

The Challenge

Inconsistent Interpretations:

Framework was subjective and prone to human error, making alignment difficult.

Lack of Nuance: Framework didn't capture complex company actions critical for engagement strategies.

No Centralized System: Inability to effectively track, link, or audit evidence across 100+ organizations.

Limited Collaboration & Transparency: Absence of a shared platform hindered team coordination and rationale documentation.

The Solution

Using Manifest Climate, OMERS was able to automate the collection of ESG data from public disclosures relative to their custom framework, significantly reducing manual effort.

The structured outputs in Excel and Power BI provide consistent, source-linked insights that accelerate assessments and enhance auditability. This streamlined process improves accuracy, saves time, and supports better-informed decision-making.

**Time Saved Per Portfolio Company
Transition Plan Assessment**

Capital One's Sustainability Edge: Speed, Compliance, and Supplier Intelligence at Scale

The Challenge:

Supplier Risk Management: Monitoring sustainability risks across 100+ suppliers was time-consuming and quickly outdated when done manually.

Peer Benchmarking: Tracking and comparing sustainability data across multiple peer groups lacked efficiency and scalability.

Regulatory Compliance: Evaluating alignment with evolving standards like CSRD, SB-261, and IFRS required a streamlined, reliable approach.

The Solution

Capital One uses Manifest Climate to streamline benchmarking and supplier analysis, enabling faster insight generation across both peer groups and suppliers. The platform enhances their ability to assess industry practices—such as carbon pricing structures or supplier transition planning—supporting more efficient and informed supply chain management.

Additionally, Manifest plays a key role in compliance efforts, serving as a reliable reference for past disclosures and helping identify potential regulatory gaps before broader organizational review.

Built for critical finance use cases

- ✓ Due diligence & questionnaires
- ✓ Compliance & risk management
- ✓ Peer benchmarking
- ✓ Research & best practices
- ✓ Portfolio engagement

DUE DILIGENCE & QUESTIONNAIRES

Transform fragmented data and responses into your **proprietary view of ESG performance**

Bridge the gap between questionnaires & sustainability insights

Run more complete due diligence, including your own private documents, and map to custom questionnaire formats for proprietary assessments.

Automate gap analysis for fast assessments, reporting, & regulatory readiness

Replace outdated, manual processes to focus on high-impact strategies

Assess disclosure alignment against mandatory and voluntary sustainability reporting standards.

Assessment Name	Datapoint	Disclosure Status	AI Generated Summary	Disclosure References
Johnson & Johnson 2024	CSRD > E1 > E1.GOV-3 > E1.GOV-3_03 Explanation of climate-related considerations that are factored...	Not Found	No specific climate-related considerations are used by the organization to determine the climate-related component of overall remuneration to members of the administrative, management and supervisory bodies. The organization does not specify any climate-related factors, such as progress towards GHG targets, being used to determine the climate-related component of remuneration.	No References Found
Proctor & Gamble 2024	CSRD > E1 > E1.GOV-3 > E1.GOV-3_03 Explanation of climate-related considerations that are factored...	Partial	The organization ties remuneration to the progress achieved in specific long-term environmental sustainability goals, including objectives related to climate change. The remuneration is linked to progress on long-term environmental sustainability and climate change objectives. However, the organization does not detail specific climate-related metrics, such as greenhouse gas (GHG) targets, limiting the completeness of the assessment.	PG_CTAP.pdf p38
Unilever 2024 Assessment	CSRD > E1 > E1.GOV-3 > E1.GOV-3_03 Explanation of climate-related considerations that are factored...	Likely Met	The organization determines the climate-related component of overall remuneration for members of the administrative, management, and supervisory bodies based on their performance against a climate KPI, specifically measuring the percentage change in greenhouse gas (GHG) emissions from energy and refrigerant use in operations. This KPI targets a reduction of 75% to 85% in GHG emissions compared to 2015 levels. The organization clearly defines a specific climate-related metric, which is the percentage reduction in GHG emissions from energy and refrigerant use, with set targets of 75% to 85% reduction from 2015 levels. This metric is directly linked to the remuneration of governance bodies, ensuring that the climate considerations are fully integrated into their compensation structure.	unilever-annual-report-and-accounts-2024.pdf p79, p96, p97, p98, p104, p105, p228, p236

Get a portfolio-level view of sustainability answers for active company engagement

Promote ESG best practices, ensure investments align with your frameworks, and track and report on stewardship initiatives and ESG metrics.

NEW

Manifest Agent – Your built-in sustainability **research & analysis agent**

Manifest Climate's AI Agent acts as an on-demand ESG research assistant. Using a simple chat interface, ask complex, tailored ESG questions and receive clear, data-backed answers sourced from verified disclosure documents.

Natural Language Q&A: Asked nuanced ESG questions in plain language

Traceable, Source-Based Responses: Every answer links back to the original disclosure source for full transparency and auditability

Contextual Intelligence: Pulls insights directly from the frameworks, sectors, and companies most relevant to your query

Integrate seamlessly to surface sustainability insights, your way

- ✓ MCP Connectors for AI agents
- ✓ Exports to PowerBI or CSV
- ✓ Datafeed or API

MCP

Bring sustainability intelligence **directly into other AI tools** with the Manifest Model Context Protocol (MCP) Connector

NEW

Manifest MCP delivers insights to your AI agent of choice, where analysis and decisions happen.

Seamlessly connect leading AI assistants with Manifest's sustainability intelligence

Powered by the MCP—the open standard for secure AI connections

Enables real-time benchmarking, disclosure analysis, and data queries within chat interfaces

Designed to make sustainability data both actionable—without compromising on data integrity, security, or compliance

MCP

Work with the leading AI agents to **surface sustainability answers, your way**

Ask intuitive, nuanced questions to close your ESG data gap. Manifest's new MCP Connector allows the AI assistants that you use everyday to securely access Manifest's sustainability data, benchmarks, and analytics in real time.

Results draw directly from a single source of truth built on expert validation and the company documents you care about.

Query directly through Copilot via MCP connector for instant answers across use cases and formats, including tables, graphs, and presentations

Streamline procurement with an official Microsoft Partner

Gain cost efficiency from Azure consumption commitment eligibility (MACC-qualified)

INTEGRATIONS

Flexible data delivery minimizes onboarding friction to drive actionability and fast time-to-value

Our Platform

Custom Data Built Around Your Business

- ✓ **Rapid custom development:** Define exact metrics you need without waiting for product roadmaps—backed by validation processes that engineer compliance-grade accuracy into every custom solution.
- ✓ **Proprietary framework mapping:** Map to your custom ESG criteria, investment methodologies, or analysis frameworks that competitors can't replicate—with audit-ready validation.
- ✓ **Private company intelligence:** Upload private disclosures and internal documents to run assessments across portfolio companies, sectors, and suppliers with the same privacy and rigor as public analysis.
- ✓ **Scalable custom expertise:** Handle custom methodologies or client evaluation criteria, and deliver advanced analysis across teams with institutional consistency.

Enterprise-level customization with **startup agility**

1

Define & Design

Each project starts with **alignment with our team** on the data, methodologies, or frameworks for your specific requirements. We'll get clear and agree on how we define acceptable outputs.

2

Develop

Our sustainability strategists and researchers kick off a **rigorous process of prompt engineering** and weighting. Meanwhile, Manifest AI models automate data extraction and processing across all formats.

3

Validate & Refine

Following Manifest QA, you'll **review resulting data** to ensure that it follows agreed-upon definitions. Refinement continues until target accuracy is reached.

4

Deliver

Get comparable data and searchable insights, delivered as a sustainability **single-source-of-truth**—whether you slice and dice in PowerBI and Excel, or pose nuanced questions to Copilot.

TAILORED SOLUTION
